## Feedback to the ScanRobot® from TREVENTUS Mechatronics GmbH

It's been over four years since we worked with ScanRobot®. During this time we were able to scan a fairly good (for our standards) quantity of books. It would be fair to say that we are satisfied with the technique. The work it is doing has exceeded our expectations. My colleagues are so specialized in working with the scanner that they can now scan virtually everything that is bound and its pages stand still :)

## Project overview

That project ended in 2017. However, due to the good results achieved and the prospect of this machine, we were able to retain the trained team, continue to develop the digital centre and digital library and formulate our own digitalization strategy. Today, our library is a benchmark for other regional libraries in the country with regard to digital conversion of paper originals. ScanRobot®, the planetary scanner and ScanGate® have proven to be an extremely powerful combination that, combined with well-trained professionals, has made our digital hub the best-equipped in Bulgaria. People come from other organizations to study, we even had a visit from representatives of the largest private archival company in Romania. We have much more work to do than we can do.

## Summary

In conclusion, I would like to express my personal gratitude to you for the kindness and patience that has brought us to the training of our team. It was very helpful and at the heart of my colleagues' specialization, making them really perfect at work now.
